

# GroupWise Calendar Exporter 2.0 Help

[Installation and Setup](#)

[Running in normal mode](#)

[Running in scheduled export mode](#)

[More information](#)

## Installation and Setup

Prerequisites:

[Microsoft .Net Framework 3.5](#)

[GroupWise Client](#)

Windows 2000, XP, 2003, Vista, 2008 or Windows 7

## Running in normal mode

To run in normal mode just double-click the program or go to the Start->Programs->SwarmSoft.net->GroupWise Calendar Exporter link to start. This must be done and the Google account information entered in the Options page to schedule Google exports from the command-line. When running in normal mode the program will try to connect to your GroupWise mailbox and may ask for your GroupWise password. After the events are shown, select the events you wish to export using the Select menu or by dragging the mouse over the events. Select the File menu or right-click the selected events to export the currently selected events.

## Running in scheduled export mode

You can schedule exports from GroupWise using the standard Windows Scheduled Tasks and by using the following command-line options. For more information on using Scheduled Tasks to schedule a program to run in Windows see the following;

<http://support.microsoft.com/kb/308569>, <http://technet.microsoft.com/en-us/appcompat/aa906020.aspx>.

Event selection options:

**All**

Selects all events from GroupWise since Jan. 1, 1980

**Smart**

Selects events from today's date forward that have not been exported before. This is like a one-way synchronization.

**Past**

Selects events from Jan. 1, 1980 up to today's date.

**Future**

Selects all future events.

**Today**

Selects only today's events

\* All of the event selection besides "Smart" will export regardless if they have been exported previously by the same user of the program. So if you export to Google Calendar 5 times for all events you will have the same events 5 times each day. Use "Smart" event selector to stop duplicate event entries from happening.

Export Type options:

**Google**

Exports to a Google calendar. Uses the login information entered in the Options page in the menu to connect to Google. You have to run the standard mode once at least to set the Google login information. The Google login password is encrypted. As of version 2.0.0 events can only be exported by command-line to your default Google calendar.

**CSV**

Exports to Comma Separated Values (CSV) file.

**iCal**

Exports to iCal format.

File name option for CSV and iCal formats:

**-file:"EXPORT FILE PATH"**

\* Enclose any file paths with spaces in quotation marks. See the examples below.

Examples:

GroupWiseCalendarExporter2.exe Google Smart

GroupWiseCalendarExporter2.exe CSV All -file:c:\temp\GroupWiseExport.csv

GroupWiseCalendarExporter2.exe iCal Today -file:"c:\documents and settings\administrator\my documents\GroupWise Export.ical"
